ORNAMENTAL FINISHING WORKS

BDCOF501

Perform Ornamental Finishing Works

Competence

RQF Level: 5

Learning Hours

Credits: 8

Sector: Construction and Building Services

Trade: Building Construction

Module Type: Specific

Curriculum: CBSBDC5001-TVET Certificate 5 in Building Construction

Copyright: © Rwanda TVET Board, 2024

Issue Date: May 2024

2024-25

Purpose statement	This specific module describes the skills, knowledge, and attitudes required to perform ornamental finishing works. It is meant for learners who have completed level IV in building construction and pursuing level V in building construction. At the end of this module, learners will be able to perform cladding installation, install glass, and apply paint coats.					
Learning assumed to be in place	Ceiling installation, Acoustic and Thermal insulations, Scaffolding Operations, Roof construction, ArchiCAD software,					
Delivery modality	Training delivery		100%	Assessment		Total 100%
	Theoretical content		30%	Formative assessment	30%	50%
	Practical work:		70%		70%	
	• Group project and presentation	20%				
	• Individual project /Work	50%				
			Summative Assessment			50%

Elements of Competency and Performance Criteria

Elements of competency	Performance criteria
1. Perform Cladding Installation	1.1. Materials, tools, and equipment are properly selected based on project specifications and requirements.
	1.2. Working area is properly prepared based on surface/site condition and cladding material type.
	1.3. Masonry cladding is correctly performed according to the design pattern
	1.4. Timber and metal cladding is properly installed according to the specified design pattern and details
	1.5. Glass cladding is properly installed according to the design details
	1.6. Alucobond cladding is properly installed according to the design details
	1.7. Wallpaper is properly applied according to the design details
2. Install Glass	2.1. Glazing tools, equipment, and materials are properly prepared in accordance with the work specification

	2.2. Working area is properly prepared based on on-site conditions
	2.3. Glasses are systematically fixed according to their methods
3. Apply Paint Coats	3.1. Materials, tools, and equipment are properly selected based on project specifications and requirements
	3.2. Working area is properly prepared based on on-site conditions
	3.3. The paint is correctly mixed according to paint specifications
	3.4. Painting coats are systematically applied in accordance with the design
	3.5. Working area is properly cleaned according to the standards

Intended Knowledge, Skills and Attitude

Knowledge	Skills	Attitude
✓ Identify materials, tools, and equipment ✓ Describe different types of ornamental finishes, ✓ Identify materials and tools used in ornamental finishing, including paints, varnishes, gilding materials ✓ Identify specialized finishing tools ✓ Identify color theory and how to achieve desired colour effects ✓ Identify catalogues, mood boards, and portfolios	✓ Interpret design drawings ✓ Perform various ornamental finishing techniques, ✓ Perform surfaces preparation for ornamental finishing ✓ Agility and attention to detail in the application of ornamental finishes ✓ Time management and organization skills to ensure efficient and high-quality work ✓ Perform assembling, joining, installation and mounting of cladding items	✓ Creativity and artistic sensibility to develop unique and aesthetically pleasing ornamental finishes ✓ Collaborative mind set to work effectively with other craftspeople, designers, and client ✓ Pay attention to the details in the finishing process ✓ Maintain cleanliness after works ✓ Willingness to continuously learn and improve skills, as ornamental finishing techniques and materials evolve

✓ Identify assembling, joining, installation and mounting techniques ✓ Identify different cleaning methods	✓ Prepare catalogues, mood boards, and portfolios ✓ Apply new trends and styles in interior decoration	✓ Patience and dedication, as ornamental finishing often requires meticulous and time-consuming work
---	---	--

Course content

Learning outcomes	At the end of the module the learner will be able to: 1. Perform cladding installation 2. Install glass 3. Apply paint coats
--------------------------	---

Learning outcome 1. Perform Cladding Installation	Learning hours: 30
Indicative content	
• Selection of materials, tools, and equipment used for cladding ✓ Identification of cladding materials + Masonry cladding materials + Timber cladding materials + Wallpaper cladding materials + Glass cladding materials + Alucobond cladding materials ✓ Select cladding materials ✓ Classification of cladding Tools + Mixing tools + Batching tools + Placing tools + Measuring tools + Cutting tools + Levelling tools + Cleaning tools ✓ Classification of cladding Equipment + Personal protective equipment [PPE] + Safety equipment + Site work equipment ✓ Quantify cladding materials	

- **Preparation of working area**
 - ✓ Analyse working area condition
 - ✚ Internal
 - ✚ External
 - ✓ Protecting and cleaning the work area
 - ✓ Erecting scaffolding
- **Performing masonry cladding**
 - ✓ Develop a detailed design plan (dimensions and patterns)
 - ✓ Measuring and marking
 - ✓ Cutting
 - ✓ Prepare the surface of the building (Set out)
 - ✓ Apply mortar to the substrate
 - ✓ Place the cladding materials
 - ✓ Applying the finishing layer
- **Installation of timber /metal cladding**
 - ✓ Measuring and marking
 - ✓ Cutting
 - ✓ Set out
 - ✓ Applying bond/fixing techniques
 - ✓ Applying timber cladding cut-offs
 - ✓ Applying the finishing layer
- **Installation of glass cladding**
 - ✓ Measuring and marking
 - ✓ Cutting
 - ✓ Adjust glass frame
 - ✓ Apply adhesives
 - ✓ Apply glass cladding panels
 - ✓ Apply the finishing layer
- **Applying Alucobond cladding**
 - ✓ Install the Alucobond frame
 - ✓ Prepare Alucobond panels
 - ✚ Measure and cut the Alco bond panels to the required sizes
 - ✚ Set out
 - ✚ Perform folding or routing
 - ✓ Install Alco bond Panels
 - ✚ Attach the Alco bond panels to the substructure
 - ✚ Secure the panels using rivets or screws
 - ✓ Sealing the joints
 - ✓ Peel off Alucobond protective coat
- **Applying wallpaper cladding**
 - ✓ Measuring and marking
 - ✓ Cutting
 - ✓ Set out

- ✓ Apply adhesives
- ✓ Apply wallpaper cladding materials
- ✓ Apply the finishings

Resources required for the indicative content

Equipment	• circular saw, band saw, router machine, surface planer, thickness planner, belt sander, grinder, jig saw, drilling machine, wheelbarrow, concrete mixer, scaffolding
Materials	• Paint, wooden board, nails, stones, timber, tiles, warning tapes, adhesive glue, screws, bolt, varnish, thinner, cement, sand, water, tile and or cladding materials, papers, glass, pencil
Tools	• Hammers, plumb bob, building line, measuring tape, spirit level, hand saws, machete, screwdrivers, spanners, squares, brush, files, rasps, marking gauge, bucket, jerry can or watering can
Facilitation techniques	Group discussion, scenario, simulation, individual activity • The trainer provides a summary of the classification of materials, tools, and equipment used for cladding and asks students to participate in the selection. • The trainer prepares a topic on the preparation of the working area and asks students to demonstrate the main activities in preparation for the working area. • The trainer displays a video on the installation of different cladding materials, and he/she asks the students to eliminate the different steps involved in the installation of masonry cladding, timber cladding, Alucobond, and glass cladding. • The trainer prepares the steps of applying Alco bond cladding on the surface and asks students to perform accordingly • Trainer and students perform the activity of application of masonry cladding on the surface and he/she asks students to apply masonry cladding with pattern themselves. • Trainer and students perform the activity of installing of timber /metal cladding on the surface and he/she asks students to install of timber /metal cladding themselves • Trainer and trainees perform the activity of installing glass cladding on the surface and he/she asks students to install glass cladding themselves • Trainer and students perform the activity of installing glass cladding on the surface and he/she asks students to install glass cladding themselves • Trainer prepares steps of installing Alucobond cladding and he/she asks students to perform themselves • Trainer and students perform the activity of applying wallpaper cladding on the surface and he/she asks students to apply wallpaper cladding themselves • The trainer asks students to use site visit report findings and individually produce the cladding's detailed drawings. • Students present their work and the trainer provides feedback and input and asks them to refine their work if necessary.

Formative assessment methods	• Written assessment • Oral assessment • Practical assessment
------------------------------	---

Learning outcome 2: Install Glass		Learning hours:25
Indicative content		
• Preparation of glazing materials, tools, and equipment ✓ Selecting materials ✓ Selecting tools ✓ Selecting Equipment • Preparing Working area ✓ Erecting scaffold ✓ Adjusting frame ✓ Clean frame ✓ Protecting and cleaning the workplace • Fixing of glass ✓ Measuring ✓ Marking ✓ Cutting ✓ Glass fixing ✓ Apply bonding methods ✓ Checking stability and smooth finishes ✓ Apply glass film paper on clear glass		
Resources required for the indicative content		
Equipment	• band saw, router machine, surface planer, thicknesses planner, glass cutter, sander, glass gun, suction cup, compass cutter, block lever, Glass cutting table	
Materials	• Glass, pencil, pen, mark pen, folding rulers, sealant/mastic with linseed oil, silicon, rubber, blanket, scotch, laser blade, nail, warning tapes, glue, screws, bolt, hinges, varnish, lacquer, thinner, glass film	
Tools	• Glazier hammer, scraper, measuring tape, putty knife, marking gauge, tool bag, screwdrivers, spanners, hand planes, squares, brush, putty chisels, divider, files/ rasps, plumb bob, building line, silicone gun	
Facilitation techniques	Group discussion, scenario, simulation, individual activity • The trainer displays a video of the glass installation and in manageable groups, he/she asks the students to discuss functions, types, materials, and glass installation steps. • The trainer and students perform the activity of fixing glass in the frame and ask the students to perform themselves	

	• The trainer asks students to use site visit report findings and individually produce the glass's detailed drawings. • Students present their work and the trainer provides feedback and input and asks them to refine their work if necessary.
Formative assessment methods	• Written assessment • Oral assessment • Practical assessment

Learning outcome 3: Apply Paint Coats		Learning hours: 25
Indicative content		
• Selection of materials, tools, and equipment used in painting ✓ Select materials used in painting ✚ Paints ✚ solvents ✓ Select tools used in painting ✓ Select equipment used in painting • Preparation of working area ✓ Protecting the working area ✓ Cleaning the working area ✓ Erect scaffolding • Paint mixing ✓ Mixing proportion ✓ Mixing Methods and techniques • Apply paint coats ✓ Painting methods/techniques ✓ Applying primer coat ✓ Applying Final and intermediate coat • Cleaning the working area ✓ Selection of Cleaning materials ✚ Water ✚ Solvent ✚ Liquid detergent ✓ Methods of cleaning paint ✓ Cleaning tools and equipment		
Resources required for the indicative content		
Equipment	• Hand paints mixing machine, air compressor with all accessories, ladder, scaffold, wheelbarrow, PPE	

Materials	• Enamel paint, emulsion paint, water, thinner, papers, petrol masking tape, sandpaper, whiting, stucco, scratching materials
Tools	• Paint tray, paint roller, brushes, trowel, tape measure, string, broom, bucket, putty knife, steel float, extension pole.
Facilitation techniques	Group discussion, scenario, simulation, individual activity • The trainer displays a video of applying paint coats on the surface and in manageable groups, he/she asks the students to discuss functions, types, materials, and steps to apply paint on the surface • Trainer prepares materials, tools, and equipment used in painting activities and he/she asks students to select the required tools used in paints coats • The trainer asks students to use site visit report findings and individually produce the paint's detailed drawings. • Students present their work and the trainer provides feedback and input and asks them to refine their work if necessary.
Formative assessment methods	• Written assessment • Oral assessment • Practical assessment

Integrated/Summative assessment (For specific module)

Integrated situation

GAB & K Hotels located in Nyagatare district wants to renovate the building external and their suite rooms. The company would like to hire a finishing team to perform external cladding and painting rooms that feel warm, and welcoming and reflect the charm of Nyagatare District. As a finishing technician, you are requested to perform masonry and glass cladding on the outside and decorative paint in the rooms. Then you are also asked to construct a sample of a model of cladding outside and painting in one room. The masonry cladding will be made of shaped volcanic stones and the painting in the room will be warm white silk paint on the walls and white matte paint on the ceiling.

The drawing scale should be 1:100

Additional information:

- ❖ Cladding specification printout on A4 paper format and specification book on hotels
- ❖ All materials and tools are available
- ❖ The client will review the model room for the bigger plan

Resources

Tools	Hammers, plumb bob, building line, measuring tape, spirit level, hand saws, machete, screwdrivers, spanners, squares, brush, files, rasps, marking gauge, bucket, jerry can or watering can
Equipment	circular saw, band saw, router machine, surface planer, thickness planner, belt sander, grinder, jig saw, drilling machine, wheelbarrow, concrete mixer, scaffolding
Materials/ Consumables	Paint, wooden board, nails, stones, timber, tiles, warning tapes, adhesive glue, screws, bolt, varnish, thinner, cement, sand, water, tile and or cladding materials, papers, glass, pencil

Assessable outcomes	Assessment criteria (Based on performance criteria)	Indicator	Observation		Marks allocation
			Yes	No	
Learning outcome 1: Perform Cladding Installation	1.1 Materials, tools, and equipment are properly selected based on project specifications and requirements.	Materials are selected			2
		Tools are selected			2
		Equipment are selected			2
	1.2 Working area is properly prepared based on surface/site condition and cladding material type.	Working area are prepared			4
		Scaffolding is erected			3
	1.3 Masonry cladding is correctly performed according to the design pattern	Measurements are taken			4
		Cutting piece is done			2
		Setting out is done			4
		Adhesives is applied			2
		Cladding materials are			2

		applied			
		Finishing layer is applied			2
	1.4 Timber and metal cladding is properly installed according to the specified design pattern and details	Measurements are taken			4
		Cutting piece is done			2
		Setting out is done			4
		Adhesives applied			2
		Cladding materials are applied			2
		Finishing layer is applied			2
Learning Outcome 2: Install Glass	2.2 Glazing tools, equipment, and materials are properly prepared in accordance with the work specification	Materials are prepared			2
		Tools are prepared			2
		Equipment are prepared			2
	2.3. Working area is properly prepared based on on-site conditions	Working area is prepared			4
	2.4. Glasses are systematically fixed according to their methods	Measurements taken are taken			4
		Cutting list is prepared			2
		Setting out is done			4
		Glasses are fixed			2
		bonding methods are applied			2
		Stability and smooth finishes is Checked			2
Learning Outcome 3: Apply Paint Coats	3.2. Materials, tools, and equipment are properly selected based on project specifications and requirements	Materials are selected			2
		Tools are selected			2
		Equipment are selected			2
	3.3. working area is properly prepared based on on-site conditions	Working area are prepared			4
	3.4 The paint is correctly mixed according to paint specifications	Mixing proportion is chosen			3
		Mixing Methods and techniques are applied			3

	3.5 Painting coats are systematically applied in accordance with the design	Paint application methods/techniques are identified			3
		Primer coat is applied			2
		Final and intermediate coats are applied			4
	3.6 Working area is properly cleaned according to the standards	Cleaning materials are selected			2
		Methods of cleaning is applied			2
		Cleaning of tools and equipment are done			3
Total marks		100			
Percentage Weightage		100%			
Minimum Passing line % (Aggregate): 70%
